

Eight ways a fluent model went wrong

Measured in the project's own outputs, 2025–2026

99.8%

of May 2025 analyses
dated themselves 2024
(1,916 of 1,919)

91

options ideas with expiry
dates already in the past

24%

of all 'compounder' scores
were exactly 68

62%

of companies given a put bias;
only 2% a call bias

51%

of three-lens verdicts
were HOLD

~130

spellings of six 'success
factors' before schemas

462

verdicts that opened with a
label instead of the answer

100%

of great companies credited
with 'continuous innovation'

Sources: origin files; evaluation outputs; data/eon.db; the flattening script's notes (~130).
